**Re: Status Report-May 2006 Sampling Event and
April-May Additional Investigation Activities
Former Gorham Manufacturing Facility
333 Adelaide Avenue, Providence, RI
Site Remediation Case No. 97-030**

Dear Mr. Martella:

Shaw Environmental, Inc. (Shaw) has prepared this status report on behalf of Textron, Inc. (Textron). This status report is for the remediation of tetrachloroethene (PCE) contaminated groundwater at the former Gorham Manufacturing Facility at 333 Adelaide Avenue, Providence, Rhode Island (Figure 1).

PCE is the primary contaminant of concern for groundwater. As discussed in the Remedial Action Work Plan and subsequent revisions, the PCE source area in the vicinity of the former building W is the area of concern. This area was treated using an in-situ application of sodium permanganate.

Shaw has performed two rounds of in situ chemical oxidation (ISCO) injections at the site. The treatment goal for the site is 7,700 micrograms per liter ($\mu\text{g}/\text{L}$) for PCE in groundwater, as per the Remedial Action Work Plan (RAWP) dated November 28, 2001 and approved by the Rhode Island Department of Environmental Management (RIDEM) in a letter dated March 15, 2002. For the first ISCO injection, performed in March and April 2002, approximately 27,000 pounds of sodium permanganate was applied to the treatment zone at the former Gorham Manufacturing Facility.

A revised RAWP was prepared by Shaw dated June 11, 2004 providing a plan for the follow-on injection of sodium permanganate as part of the remediation of PCE contaminated groundwater.

Mr. Joseph T. Martella, II
June 23, 2006
Page 2 of 11

The Revised RAWP was approved by RIDEM in a letter dated July 27, 2004. The follow-on permanganate injections were started on September 28 and finished on October 4, 2004. Approximately 24,400 pounds of oxidant as sodium permanganate were applied to the treatment area. Quarterly groundwater monitoring has been conducted since completion of the follow-on injection.

A recent RAWP Addendum was prepared by Shaw dated November 21, 2005 providing additional investigation activities to develop additional data on source area conditions needed to assess further remedial actions required to achieve the remediation of the PCE source area. This status report describes the field work, sampling results, and information collected from the activities conducted in accordance with the approved RAWP Addendum dated November 21, 2005 and conditionally approved by RIDEM in a letter dated January 6, 2006. The conditional approval required the installation and sampling of compliance wells along Adelaide Avenue and the boundary between the Stop&Shop property and Parcel B to the west of the PCE source area. In addition, this report includes quarterly monitoring activities for May 2006 conducted in accordance with the Revised RAWP dated June 11, 2004.

FIELD ACTIVITIES

The following field activities were conducted in April and May 2006.

- Additional source area investigation activities were conducted between April 6 and April 25, 2006. The additional investigation activities included soil sampling, monitoring well installation and groundwater sampling of the new wells installed. (See Figure 1)
- As requested by RIDEM's comments and conditions letter dated January 6, 2006 in response to the RAWP Addendum, additional compliance wells were installed on May 1, 2006 through May 3, 2006 to the south of MW-101S and MW-101D and along the perimeter of the Parcel B Boundary. (See Figure 1)
- As part of the post sodium permanganate injection monitoring, a quarterly groundwater sampling event was conducted on May 3, 2006.
- An initial groundwater sampling round of the new compliance wells installed on May 1 through May 3, 2006 was conducted on May 10, 2006.

Additional Source Area Investigation Activities (Soil Sampling, Well Installation and Groundwater Sampling)

Additional investigation activities were conducted to obtain additional data on source area conditions. On April 6 through April 13, 2006 six soil borings were advanced in order to define the horizontal and vertical extent of PCE and residual source VOCs in the unsaturated and saturated zones of the apparent source area based on recent groundwater data. The soil borings were advanced via vibratory drilling methods and completed as 1.32" monitoring wells. The locations of the soil borings/monitoring wells are shown on Figure 1 and Figure 2 (shown as

wells MW-210, MW-211, MW-212, MW-213, MW-214, and MW-215). Boring logs are contained in Appendix A. The drilling services were performed by Pine and Swallow Associates (Pine) of Groton, MA and overseen by a Shaw Environmental field geologist.

Prior to drilling, all subsurface locations were cleared to a depth of 5 feet below ground surface (bgs) using an air-knife. Soil samples were collected at four foot intervals from 5 feet bgs following the utility clearance by air-knife. Soil samples were collected via dedicated plastic sample liners used in the VibraDrill H641 drill rig. Soil samples were collected for geologic logging and field screening for the presence of volatile organic vapors and residual source VOCs. Select samples were submitted to the laboratory for analysis. Based on historical subsurface data collected from the source area, a confining silt layer is present at an approximate depth of 50 to 60 feet bgs. As a result, the source area soil borings were advanced to the depth of approximately 5 feet into the silt layer. The depth of the confining silt layer ranged from 45 to 60 feet bgs. Further details on the silt layer at each boring are provided in the *Source Area Well Installations* Table provided below.

Source Area Well Installations			
Well ID	Location	Screen Interval	Approximate Top of Confining Silt Interval
MW-210	Approximately 20 feet northwest of MW-101S and MW-101S locations.	40 to 50 ft. bgs	51 ft. bgs
MW-211	Approximately 15 feet northeast of MW-101S and MW-101D.	35 to 45 ft. bgs	45 ft. bgs
MW-212	Approximately 35 feet west of MW-101S and MW-101D	39 to 49 ft. bgs	49 ft. bgs
MW-213	Approximately 30 feet northwest of MW-101S and MW-101D.	35 to 45 ft. bgs	45 ft. bgs
MW-214	Approximately 10 ft northeast if MW-202D.	50 to 60 ft. bgs	60 ft. bgs
MW-215	Approximately 10 feet southwest of MW-202S	44 to 54 ft. bgs	54 ft. bgs

Soil samples collected from each interval were placed in jars for headspace screening and screened for volatile organic vapors using a Mini Rae 2000 photoionization detector (PID) equipped with a 10.6 electron-volt lamp. PID readings ranged from 0 to 7,800 parts per million by volume (ppmv). The highest PID screening values were detected at SB-210. Generally, higher PID values were measured at the water table and within the saturated zone for each boring.

In addition, soil samples collected from select sample intervals were screened for the presence of residual source VOCs by use of the OilScreenSoil (Sudan IV)™ dye test kit. Soil was placed in a Sudan IV test bottle to the line indicated on the bottle and hot water was added to the test bottle to the line indicated on the bottle. The test bottle containing soil and hot water was shaken until the red Azo dye completely dissolved in the contents of the test bottle. The presence of residual source VOCs (at a concentration greater than 500 ppm) is indicated by a red meniscus or red spots on the side of the jar. The soil samples selected for the Sudan Dye Testing were generally within the saturated zone where evidence of impacts was present. Based on the Sudan IV tests conducted, residual source VOCs were detected in one soil boring, SB-210 at 27 to 31 feet bgs and 43 to 46 feet bgs.

Soil samples submitted for laboratory analysis were based on evidence of impacts according to visual and olfactory observation, headspace screening, and residual source VOC test kit screening. Soil samples were submitted to Severn Trent Laboratory of Westfield, Massachusetts (STL) for analysis of volatile organic compounds (VOCs) by EPA Method 8260B and for analysis of percent solids. The samples for VOC analysis were collected by placing 10 grams of soil using an open ended syringe directly into 10 milliliters of methanol to prevent loss of volatile compounds. A copy of the laboratory analytical report is included in Appendix B and a summary of the soil analytical results is provided in Table 1.

Soil samples were also collected for soil oxidant demand (SOD), total organic carbon (TOC) and fractional organic carbon (FOC) analyses. Four soil samples were collected from soil borings within the source area and included the following; SB-210 (30-31 feet bgs), SB-210 (43-46 feet bgs), SB-214 (57 to 61 feet bgs), and SB-213 (37-39 feet bgs) and a 1 liter groundwater sample from MW-101D. The samples collected for SOD were submitted to Shaw Environmental, Inc., Technology Applications Group in Knoxville Tennessee for analysis. A copy of the laboratory analytical report is provided in Appendix C.

The soil borings were completed as monitoring wells. The monitoring wells were set above the confining silt layer. Each monitoring well consists of a 1.32" steel pipe with a 10 foot section of steel screen with 2 inch by 0.015 inch vertical slots and a 2 foot steel sump below the screen. A summary of the source area monitoring wells is provided in the *Source Area Well Installations* table above.

Groundwater samples were collected from the six monitoring wells (MW-210 through MW-215) on April 20, 2006. The groundwater samples were collected via a modified low flow methodology. Each well was purged for 30 to 40 minutes prior to collecting a sample. Field parameters were recorded and included oxidation/reduction potential (ORP), dissolved oxygen (DO), pH, temperature, specific conductance (SC) and turbidity. An initial water level measurement was recorded prior to purging the well and a final measurement upon completion of the well purge and sample collection. In addition, each well was gauged for free product using an interface probe.

A summary of the field measurements are included in Table 2. The groundwater samples collected from each monitoring well were submitted to STL for analysis of VOCs by EPA Method 8260B, chemical oxygen demand (COD) by EPA Method 410.4 and chloride by EPA

Method 300.0. No free product was detected in any of the wells. A summary of the analytical results is provided in Table 4, and a copy of the laboratory analytical results is included in Appendix B.

On April 25, 2006, groundwater samples were collected from two existing site wells in the source area (MW-101D and MW-202D) and one well up-gradient of the source area (MW-116D) in order to evaluate the presence of bacteria able to dechlorinate PCE and environmental conditions for the anaerobic degradation of PCE. The groundwater samples were collected via a modified low flow methodology. Each well was purged for 30 to 40 minutes prior to collecting a sample. Field parameters were recorded and included oxidation/reduction potential (ORP), dissolved oxygen (DO), pH, temperature, specific conductance (SC) and turbidity. In addition, an initial water level measurement was recorded prior to purging the well and a final measurement upon completion of the well purge and sample collection.

A summary of the field measurements are included in Table 2. The groundwater samples were submitted to Shaw Environmental Inc., laboratory in Lawrenceville, NJ for analysis of total and dissolved iron and manganese, reduced gases - methane, ethane, ethene (M/E/E) and anions. In addition, a groundwater sample was collected from MW-101D, MW-202D, and MW-116D for analysis for the presence of the bacteria, *Dehalococcoides* (DHC) species, in groundwater by polymerase chain reaction (PCR) analysis. This sample was collected under a nitrogen blanket to minimize exposure to atmospheric air and the sample bottle was completely filled in order to eliminate the headspace within the sample bottle, which was capped with a Teflon-lined cap. The groundwater sample collected for PCR was submitted to Shaw Environmental Inc., Technology Applications Group in Knoxville Tennessee for analysis. A summary of the results is included in Table 5, and a copy the laboratory analytical report is included in Appendix B.

Additional Compliance Well Installation and Sampling

Three sets of well clusters (MW-216, MW-217 and MW-218) were installed on May 1 through May 3, 2006. These wells were installed to comply with RIDEM's request for additional monitoring wells at approximately the same screen intervals as MW-101S and MW-101D. RIDEM requested two well clusters along the Parcel B boundary located at western edge of the Stop & Shop boundary (MW-216 and MW-217) and one well cluster along Adelaide Ave boundary of the site, south of MW-101S and MW-101D (MW-218). Shallow and deep well pairs were installed at each well cluster. The locations of the monitoring wells are shown on Figure 1. Boring logs are contained in Appendix A. Drilling services were performed by Technical Drilling Services (TDS) of Sterling, MA and overseen by a Shaw Environmental field geologist.

Prior to drilling, all subsurface locations were cleared to a depth of 5 feet below ground surface (bgs) using an air-knife. The monitoring wells were installed via hollow stem auger (HSA) drilling methods. Soil samples were collected at the deeper monitoring wells at 5 foot intervals from 5 feet bgs following the utility clearance by air-knife. Soil samples were collected via a 2 foot, 2-inch diameter stainless steel split spoon sampler advanced by dropping a 140 pound weight from a height of 30 inches. Soil samples were collected for geologic logging and field screening for the presence of volatile organic vapors and residual source VOCs. Based on historical subsurface data collected from the source area, a confining silt layer is present at an

Mr. Joseph T. Martella, II

June 23, 2006

Page 6 of 11

approximate depth of 60 feet bgs. As a result, the deeper monitoring wells were advanced to the depth of the confining silt layer and extended 5 feet into the silt layer to confirm the depth of the confining silt layer.

Soil samples collected from the deep monitoring wells were screened for volatile organic vapors by placing soil from each soil interval into jars for headspace screening and screen using a Mini Rae 2000 PID equipped with a 10.6 electron-volt lamp. PID readings ranged from 0 to 218 ppmv. The highest PID screening values were detected at MW-216D. A strong petroleum odor, black staining and a petroleum sheen were noted during the installation of the MW-216 well cluster. A petroleum odor was also noted during the installation of the MW-217 well cluster, however no sheen or black staining were noted and PID screening values ranged from 0 to 29.6 ppmv. No petroleum odor, black staining or sheen was detected at the MW-218 well cluster and PID readings ranged from 0 to 32 ppmv. There was no evidence of residual source VOCs at any of these well clusters.

Each of these monitoring wells consists of 2-inch PVC with a 2-inch PVC 0.010-inch slot screen. The deeper monitoring well in each well cluster is screened above the confining silt layer and the shallow well in each well cluster is screened at the water table. Water was encountered at 25 feet bgs at each monitoring well cluster. A summary of the new compliance monitoring well information is provided below.

New Compliance Well Installations			
Well ID	Location	Screen Intervals	Approximate Top of Confining Silt Interval
MW-216S / MW-216D	Approximately 175 ft north of Adelaide Ave along Parcel B boundary.	20 to 30 ft. bgs 35 to 40 ft. bgs	40 ft. bgs
MW-217S / MW-217D	Approximately 285 ft north of Adelaide Ave along Parcel B boundary.	20 to 30 ft bgs 39 to 49 ft. bgs	49 ft. bgs
MW-218S / MW-218D	Approximately 40 ft south of MW-101S and MW-101D along Adelaide Ave.	20 to 30 ft bgs 42 to 52 ft. bgs	52 ft. bgs

Groundwater samples were collected for analysis for VOCs by EPA Method 8260B on May 10, 2006 from the six new compliance monitoring wells. Groundwater samples were submitted to STL for analysis. A copy of the laboratory analytical report is provided in Appendix B and a summary of the analytical data is provided in Table 6.

Mr. Joseph T. Martella, II

June 23, 2006

Page 7 of 11

Quarterly Monitoring Activities

Collection of groundwater samples and field parameter measurements occurred on May 3, 2006. Field measurements included oxidation/reduction potential (ORP), dissolved oxygen (DO), pH, temperature, and specific conductance (SC). Groundwater elevation measurements were also collected. These results are presented in Tables 2, 3 and 7.

Based on the measured water levels collected during the quarterly monitoring sampling event (May 3, 2006) and collected during the compliance well sampling (May 10, 2006), the depth to groundwater in the shallow overburden across the site ranged from 24.16 feet to 26.35 feet. A summary of the water level measurements and groundwater elevations is provided in Table 3. A groundwater contour map is presented as Figure 2 and indicates that groundwater flow direction is to the north and northeast.

Quarterly Groundwater Sampling

Groundwater samples were collected for analysis for volatile organic compounds (VOCs) (EPA Method 8260B), chloride (EPA Method 300.0 Part A), and chemical oxygen demand (COD) (Hach 8000) on May 3, 2006 from 20 monitoring wells within and around the treatment area and including the compliance wells. One duplicate sample was also collected for VOC analysis. Groundwater samples were delivered to AMRO Environmental Laboratories Corporation in Merrimack, New Hampshire for analysis.

SUMMARY OF ANALYTICAL DATA

The following is a summary of the analytical data associated with field activities conducted in April and May 2006.

Additional Source Area Investigation (Soil and Groundwater Sampling)

Based on the analytical results for soil samples collected for VOC analysis, PCE concentrations were detected in all soil samples analyzed. The PCE concentrations ranged from 2,500 to 77,000,000 µg/kg. The highest PCE concentrations were detected at SB-210 at sample interval 30 to 31 feet bgs at a concentration of 77,000,000 µg/kg and at sample interval 43 to 46 feet bgs at a concentration of 4,400,000 µg/kg. These results indicate that SB-210 is located within a residual VOC source area since the PCE concentrations are significantly higher than soil samples collected from surrounding soil boring locations and at concentrations that indicated residual source VOCs are present (i.e., higher than what could theoretically partition between the dissolved phase and the organic carbon present within the soil matrix). The presence of residual source VOCs was also indicated by the positive test results using the field test kit. Other VOCs detected in the soil samples collected include trichloroethene, bromomethane, 1,1-dichloropropene, 1,1-dichloroethene, and 1,1,2-trichloroethane. The concentrations of these compounds ranged from 21 to 620 µg/kg. A summary of the soil analytical results is provided in Table 1.

In addition, the results for the soil samples collected for SOD, TOC and FOC are presented in Appendix C. Based on the analytical summary provided, the SOD results for the samples collected from SB-210 indicated very high oxidant demand of 21 and 23 g/kg. Calculation of the SOD based on the PCE mass in the sample from SB-210 (30-31 feet bgs) indicates a theoretical demand of approximately 100 g/kg. The lower than predicted result may be due to the SOD test method, which uses test jars with a headspace where PCE can volatilize from the sample. The SOD results for the samples collected from SB-213 and SB-214 (1.6 g/kg and 2.0 g/kg, respectively) were similar to earlier SOD results of between 1.4 g/kg and 2.7 g/kg for samples collected in March 2004.

Based on the analytical results for the groundwater samples collected from the new monitoring wells installed within the source area (MW-210 through MW-215), PCE was detected in all groundwater samples. The PCE concentrations found in wells MW-210, MW-211, MW-214, and MW-215, are equal to or above the treatment goal of 7,700 ug/L. The chloride and COD results for the groundwater samples are consistent with the results from previous quarterly monitoring results for chloride and COD.

Based on the results of the PCR analysis for groundwater within the source area, DHE bacteria were not detected in the groundwater samples submitted for analysis. However, the presence of PCE biodegradation breakdown products (including: 1,1-Dichloroethene, cis-1,2-Dichloroethene, trichloroethene, and vinyl chloride) in groundwater samples indicates that biodegradation is occurring. A summary of the PCR results is included in Table 5 and a copy of the laboratory report is provided in Appendix D.

Compliance Well Sampling

PCE was not detected in groundwater samples collected from compliance wells MW-216S, MW-216D, MW-217S and MW-217D. PCE was detected in MW-218S and MW-218D located south of MW-101S and MW-101D at concentrations of 290 and 990 ug/L respectively, which exceeds the RIDEM's GB compliance standard of 150 ug/L. No other VOCs exceed the GB Groundwater Objectives listed in Table 4 of the Remediation Regulations where listed. Other detected VOCs in groundwater samples collected from the compliance wells include vinyl chloride, methyl tert-butyl ether, cis-1,2-dichloroethene, benzene, trichloroethene, 1,1,2-trichloroethane, acetone, toluene, m,p-xylene, o-xylene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, naphthalene and 2-butanone. Naphthalene was detected in groundwater samples collected from MW-216S and MW-217S located along the Western edge of the Stop & Shop Boundary, along the Parcel B boundary. A summary of the analytical data associated with the compliance wells is included in Table 6 and a copy of the laboratory report is provided in Appendix B.

Quarterly Groundwater Sampling

The PCE concentrations found in wells MW-202D, MW-202S, MW-207D, and MW-207S, are currently above the treatment goal of 7,700 ug/L. The detected PCE concentration found in MW-101D was lower than previous sampling rounds. The reduced concentration may be

Mr. Joseph T. Martella, II
June 23, 2006
Page 9 of 11

attributed to heavy rain that occurred on the day of sampling event. Due to surface water that was puddling above the well casing on May 3, 2006, monitoring well, MW-101S, was sampled on May 10, 2006. The detected PCE concentration found in MW-101S was also lower than previous rounds and may be attributed to the recent heavy rain events. Other detected VOCs from the treatment area include cis-1,2-dichloroethene, trichloroethene, 1,1,1-trichloroethane, trichlorofluoromethane, 1,1,-dichloroethene, 1,1,-dichloroethane, methyl tert-butyl ether, 1,1,1,2-tetrachloroethane, carbon tetrachloride, and benzene.

A summary of the analytical data associated with the treatment area is contained in Table 7 and a copy of the laboratory analytical report is provided in Appendix B. A summary of PCE concentrations across the site are depicted on Figure 3. As indicated on Figure 3, the highest PCE concentrations are within the vicinity of monitoring wells MW-210, MW-211, MW-215, MW-202S and MW-202D. Also, noted on the map, the February 23, 2006 PCE results from MW-101S and MW-101D are shown rather than the May 2006 results due to the possibility that concentrations were reduced as a result of heavy rain.

FUTURE ACTIVITIES

The sampling results and information collected during the additional source area investigation activities and the recent groundwater sampling events will be used to develop a RAWP addendum. It is anticipated that a RAWP addendum will be prepared and submitted to RIDEM in approximately 60 days.

Field parameter measurements, groundwater elevation measurements, and groundwater sampling will continue on a quarterly basis. The next quarterly sampling event is scheduled for August 2006. The next compliance well and quarterly sampling event is scheduled for November 2006.

If you have any questions, please contact Ed Van Doren at (603) 870-4530.

DATA REPORTING QUALIFIERS

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2627-1

Lab Section	Qualifier	Description
GC/MS VOA	B	Compound was found in the blank and sample.
	*	LCS, LCSD, MS, MSD, MD, or Surrogate exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LOGIN SAMPLE RECEIPT CHECK LIST

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2627-1

Login Number: 2627

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Project Manager: Becky Mason

The test results in this report meet all NELAC requirements for accredited parameters. Any exceptions to NELAC requirements are noted in this report. Pursuant to NELAC, this report may not be reproduced except in full, and with written approval from the laboratory. STL Westfield Certifications and Approvals: MADEP MA014, RIDOH57, CTDPH 0494, VT DECWSD, NH DES 253903-A, NELAP FL E87912 TOX, NELAP NJ MA008 TOX, NELAP NY 10843, NY DOH 10843.

METHOD SUMMARY

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2783-1

Description	Lab Location	Method	Preparation Method
Matrix: Solid			
Volatile Organic Compounds by GC/MS	STL-WES	SW846 8260B	
Purge-and-Trap for Aqueous Samples/High	STL-WES		SW846 5030B
Percent Moisture	STL-WES	EPA	PercentMoisture

DATA REPORTING QUALIFIERS

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2783-1

Lab Section	Qualifier	Description
GC/MS VOA	*	LCS, LCSD, MS, MSD, MD, or Surrogate exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LOGIN SAMPLE RECEIPT CHECK LIST

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2783-1

Login Number: 2783

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DATA REPORTING QUALIFIERS

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2899-1

Lab Section	Qualifier	Description
GC/MS VOA	*	LCS, LCSD, MS, MSD, MD, or Surrogate exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	H	Sample was prepped or analyzed beyond the specified holding time

Login Number: 2899

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	2.6 C
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

Job Number: 360-2783-1

Job Description: Textron Providence 101960

For:
Shaw Environmental & Infrastructure, Inc
11 Northeastern Boulevard
Salem, NH 07079-1953

Attention: Edward Van Doren

A handwritten signature of "Jamie Wickham" is written over a dotted rectangular background.

Jamie Wickham
Technology Manager
jwickham@stl-inc.com
04/28/2006

Project Manager: Becky Mason

The test results in this report meet all NELAC requirements for accredited parameters. Any exceptions to NELAC requirements are noted in this report. Pursuant to NELAC, this report may not be reproduced except in full, and with written approval from the laboratory. STL Westfield Certifications and Approvals: MADEP MA014, RIDOH57, CTDPH 0494, VT DECWSD, NH DES 253903-A, NELAP FL E87912 TOX, NELAP NJ MA008 TOX, NELAP NY 10843, NY DOH 10843.

METHOD SUMMARY

Client: Shaw Environmental & Infrastructure, Inc

Job Number: 360-2783-1

Description	Lab Location	Method	Preparation Method
Matrix: Solid			
Volatile Organic Compounds by GC/MS	STL-WES	SW846 8260B	
Purge-and-Trap for Aqueous Samples/High	STL-WES		SW846 5030B
Percent Moisture	STL-WES	EPA PercentMoisture

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Methodology Review

Volatile Organics

Unless otherwise specified, water samples are analyzed for volatile organics by purge and trap GC/MS as specified in EPA Method 8260 or 624. Soil samples are prepared by 5035- methanol extraction prior to analysis by 5030. GC/MS nontargeted compounds are analyzed for only upon request using a library search of the EPA/NIST98 mass spectral library of compounds at the greatest apparent concentrations (>10% of the nearest internal standard) for a total of 15 hits.

Other Organics

Other Organics such as tertbutyl alcohol, and dissolved gases (methane,ethane, ethene, propane) are analyzed using modified EPA method 8015 unless specified. TBA is analyzed by a heated purge and trap unto a GC equipped with an FID detector. Dissolved gases are prepared by a modification of Campbell, and Vandegrift(Journal of Chromatographic Science, 1998, Vol 38, p253-256. Volatile fatty acids (acetate, formate, butyrate, propionate) are analyzed by ion chromatography. Nitroaromatics are analyzed using Method 8330.

All Microbiology and Inorganic analysis is done by standard methods as specified in Test Method for Evaluating Solid Wastes, SW846, on line methods; EPA methods and Guidance of Analysis of Water, 1999; or Standard Methods for the examination of Water and Wastewater, 18/19th ed.

Reporting Qualifiers

- U- The compound was not detected at the indicated PQL concentration.
- J- Approximate concentration of the compound. Detection of compound above calculated MDL but below the PQL of the analytical method. 99% confidence that the compound is present.
- D- Diluted sample
- B- The analyte was observed in laboratory blank as well as the sample - for EPA SW856 8260b and EPA 624 analysis
- E- Compound detected above the linear range of the curve. Value given is an estimated value.

Subject: RE: X2566 Trexton Providence : samples

Tim-

If possible please add nitric acid to this to overcome the pH issue and analyze the samples. Just note on report that incorrect preservative was put in original sampling bottles and correction made at Chemtech.

Thanks

Subject: X2566 Trexton Providence : samples

Randi,

There is a problem with the Trexton samples. The COC says the samples are preserved with HNO₃. The bottle labels say NaOH. pH confirmation shows the pH of all samples to be about 12.

Please advise if we should analyze these samples.

Thanks,

Tim

OK, thanks. What report type will you need for Trexton?

Thanks,

Tim

Tim-

Along with Corrine's Lipari samples I am sending a set of 20+ samples for the Aerojet project - dissolved Mn and Fe. As well I am sending three samples on a new project - for dissolved and total Fe and Mn.

DATA REPORTING QUALIFIERS- INORGANIC

For reporting results, the following "Results Qualifiers" are used:

- B** If the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL), but greater than or equal to the Instrument Detection Limit (IDL).
- U** If the analyte was analyzed for, but not detected.
- E** The reported value is estimated because of the presence of interference.
- M** Duplicate injection precision not met.
- N** Spiked sample recovery not within control limits.
- S** The reported value was determined by the Method of Standard Addition (MSA).
- W** Post-digestion spike for Furnace AA analysis is out of control limits (85-115%), while absorbance is less than 50% of spike absorbance.
- * Duplicate analysis not within control limits.
- + Correlation coefficient for the MSA is less than 0.995.
- *** Entering "S", "W" or "+" is mutually exclusive. NO combination of these qualifiers can appear in the same field for an analyte.
- M** Method qualifiers
 - "P" for ICP instrument
 - "A" for Flame AA
 - "PM" for ICP when Microwave Digestion is used
 - "AM" for flame AA when Microwave Digestion is used
 - "FM" for furnace AA when Microwave Digestion is used
 - "CV" for Manual Cold Vapor AA
 - "AV" for automated Cold Vapor AA
 - "CA" for MIDI-Distillation Spectrophotometric
 - "AS" for Semi -Automated Spectrophotometric
 - "C" for Manual Spectrophotometric
 - "T" for Titrimetric
 - "NR" for analyte not required to be analyzed

APPENDIX A**QA REVIEW GENERAL DOCUMENTATION**Project #: X2566

Completed

For thorough review, the report must have the following:

GENERAL:

Are all original paperwork present (chain of custody, record of communication, airbill, sample management lab chronicle, login page)

Check chain-of-custody for proper relinquish/return of samples

Is the chain of custody signed and complete

Check internal chain-of-custody for proper relinquish/return of samples /sample extracts

Collect information for each project id from server. Were all requirements followed

COVER PAGE:

Do numbers of samples correspond to the number of samples in the Chain of Custody and on login page

Do lab numbers and client Ids on cover page agree with the Chain of Custody

CHAIN OF CUSTODY:

Do requested analyses on Chain of Custody agree with form I results

Do requested analyses on Chain of Custody agree with the log-in page

Were the correct method log-in for analysis according to the Analytical Request and Chain of Custody

Were the samples received within hold time

Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle

ANALYTICAL:

Was method requirement followed?

Was client requirement followed?

Does the case narrative summarize all QC failure?

Subject: 101960-08 Textron Gorham

Workorder No.: 0605080

Dear Ed VanDoren:

AMRO Environmental Laboratories Corp. received 8 samples on 5/11/06 for the analyses presented in the following report.

AMRO is accredited in accordance with NELAC and certifies that these test results meet all the requirements of NELAC, where applicable, unless otherwise noted in the case narrative.

The enclosed Sample Receipt Checklist details the condition of your sample(s) upon receipt. Please be advised that any unused sample volume and sample extracts will be stored for a period of 60 days from sample receipt date (90 days for samples from New York). After this time, AMRO will properly dispose of the remaining sample(s). If you require further analysis, or need the samples held for a longer period, please contact us immediately.

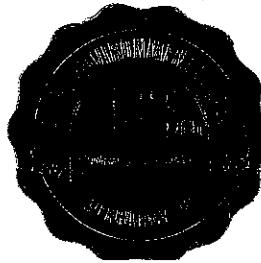

This report consists of a total of 40 pages. This letter is an integral part of your data report. All results in this project relate only to the sample(s) as received by the laboratory and documented in the Chain-of-Custody. This report shall not be reproduced except in full, without the written approval of the laboratory. If you have any questions regarding this project in the future, please refer to the Workorder Number above.

Sincerely,

Nancy Stewart
Vice President

State Certifications: NH (NELAC): 1001, MA: M-NH012, CT: PH-0758, NY: 11278 (NELAC), ME: NH012 and 1001, NJ: NH125, RI: 00105, U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Service Center (NFESC).

Hard copy of the State Certification is available upon request.

SAMPLE RECEIPT CHECKLIST

Client:	SHAW ENVIRONMENTAL, INC			AMRO ID:	0605080
Project Name:	TEXTRON GORHAM			Date Rec.:	5-11-06
Ship via: (circle one)	Fed Ex., UPS	AMRO Courier,		Date Due:	5-18-06
Hand Del., Other Courier, Other:					
Items to be Checked Upon Receipt					
1. Army Samples received in individual plastic bags?	<input type="checkbox"/>				
2. Custody Seals present?	<input type="checkbox"/>				
3. Custody Seals Intact?	<input type="checkbox"/>				
4. Air Bill included in folder if received?	<input type="checkbox"/>				
5. Is COC included with samples?	<input type="checkbox"/>				
6. Is COC signed and dated by client?	<input type="checkbox"/>				
7. Laboratory receipt temperature.	TEMP = <i>2°</i>				
Samples rec. with ice <input checked="" type="checkbox"/> ice packs <input type="checkbox"/> neither <input type="checkbox"/>					
8. Were samples received the same day they were sampled?	<input type="checkbox"/>				
Is client temperature $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$?	<input type="checkbox"/>				
If no obtain authorization from the client for the analyses.					
Client authorization from: _____ Date: _____ Obtained by: _____					
9. Is the COC filled out correctly and completely?	<input type="checkbox"/>				
10. Does the info on the COC match the samples?	<input type="checkbox"/>				
11. Were samples rec. within holding time?	<input type="checkbox"/>				
12. Were all samples properly labeled?	<input type="checkbox"/>				
13. Were all samples properly preserved?	<input type="checkbox"/>				
14. Were proper sample containers used?	<input type="checkbox"/>				
15. Were all samples received intact? (none broken or leaking)	<input type="checkbox"/>				
16. Were VOA vials rec. with no air bubbles?	<input type="checkbox"/>				
17. Were the sample volumes sufficient for requested analysis?	<input type="checkbox"/>				
18. Were all samples received?	<input type="checkbox"/>				
19. VPH and VOA Soils only:	<input type="checkbox"/>				
Sampling Method VPH (circle one): M=Methanol, E=EnCore (air-tight container)					
Sampling Method VOA (circle one): M=Methanol, SB=Sodium Bisulfate, E=EnCore, B=Bulk					
If M or SB:					
Does preservative cover the soil?					
If NO then client must be faxed.					
Does preservation level come close to the fill line on the vial?					
If NO then client must be faxed.					
Were vials provided by AMRO?					
If NO then weights MUST be obtained from client					
Was dry weight aliquot provided?					
If NO then fax client and inform the VOA lab ASAP.					
20. Subcontracted Samples:	<input type="checkbox"/>				
What samples sent:					
Where sent:					
Date:					
Analysis:					
TAT:					
21. Information entered into:					
Internal Tracking Log?	<input type="checkbox"/>				
Dry Weight Log?	<input type="checkbox"/>				
Client Log?	<input type="checkbox"/>				
Composite Log?	<input type="checkbox"/>				
Filtration Log?	<input type="checkbox"/>

CASE NARRATIVE

No QC deviations were observed.

DATA COMMENT PAGE

Organic Data Qualifiers

- ND Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than the method detection limit.
- H Method prescribed holding time exceeded.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- R RPD outside accepted recovery limits.
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- # See Case Narrative

Micro Data Qualifiers

- TNTC Too numerous to count

Inorganic Data Qualifiers

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J Indicates a value greater than or equal to the method detection limit, but less than the quantitation limit.
- H Indicates analytical holding time exceedance.
- B Indicates that the analyte is found in the associated blank, as well as in the sample.
- MSA Indicates value determined by the Method of Standard Addition
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- W Post-digestion spike for Furnace AA analysis is out of control limits (85-115), while sample absorbance is less than 50% of spike absorbance.
- *
- + Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995
- # See Case Narrative

Report Comments:

1. Soil, sediment and sludge sample results are reported on a "dry weight" basis.
2. Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

Subject: 101960 Textron

Workorder No.: 0605030

Dear Ed VanDoren:

AMRO Environmental Laboratories Corp. received 22 samples on 5/4/2006 for the analyses presented in the following report.

AMRO is accredited in accordance with NELAC and certifies that these test results meet all the requirements of NELAC, where applicable, unless otherwise noted in the case narrative.

The enclosed Sample Receipt Checklist details the condition of your sample(s) upon receipt. Please be advised that any unused sample volume and sample extracts will be stored for a period of 60 days from sample receipt date (90 days for samples from New York). After this time, AMRO will properly dispose of the remaining sample(s). If you require further analysis, or need the samples held for a longer period, please contact us immediately.

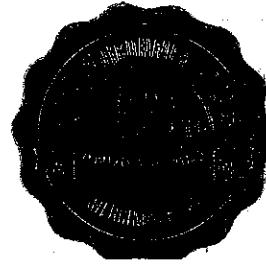

This report consists of a total of 122 pages. This letter is an integral part of your data report. All results in this project relate only to the sample(s) as received by the laboratory and documented in the Chain-of-Custody. This report shall not be reproduced except in full, without the written approval of the laboratory. If you have any questions regarding this project in the future, please refer to the Workorder Number above.

Sincerely,

Nancy Stewart
Vice President

State Certifications: NH (NELAC): 1001, MA: M-NH012, CT: PH-0758, NY: 11278 (NELAC), ME: NH012 and 1001, NJ: NH125, RI: 00105, U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Service Center (NFESC).

Hard copy of the State Certification is available upon request.

AMRO Environmental Laboratories Corp.

SAMPLE RECEIPT CHECKLIST

111 Herrick Street
Merrimack, NH 03054
(603) 424-2022

Client: <i>SHAW</i>	AMRO ID: <i>0605030</i>				
Project Name: <i>101960 TEXTRON</i>	Date Rec.: <i>5-4-06</i>				
Ship via: (circle one) Fed Ex., UPS, AMRO Courier, Hand Del., Other Courier, Other:	Date Due: <i>5-11-06</i>				
Items to be Checked Upon Receipt 1. Army Samples received in individual plastic bags? 2. Custody Seals present? 3. Custody Seals Intact? 4. Air Bill included in folder if received? 5. Is COC included with samples? 6. Is COC signed and dated by client? 7. Laboratory receipt temperature. TEMP = <i>60</i> Samples rec. with ice <input checked="" type="checkbox"/> ice packs <input type="checkbox"/> neither <input type="checkbox"/> 8. Were samples received the same day they were sampled? Is client temperature $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$? If no obtain authorization from the client for the analyses. Client authorization from: _____ Date: _____ Obtained by: _____ 9. Is the COC filled out correctly and completely? 10. Does the info on the COC match the samples? 11. Were samples rec. within holding time? 12. Were all samples properly labeled? 13. Were all samples properly preserved? 14. Were proper sample containers used? 15. Were all samples received intact? (none broken or leaking) 16. Were VOA vials rec. with no air bubbles? 17. Were the sample volumes sufficient for requested analysis? 18. Were all samples received? 19. VPH and VOA Soils only: Sampling Method VPH (circle one): M=Methanol, E=EnCore (air-tight container) Sampling Method VOA (circle one): M=Methanol, SB=Sodium Bisulfate, E=EnCore, B=Bulk If M or SB: Does preservative cover the soil? If NO then client must be faxed. Does preservation level come close to the fill line on the vial? If NO then client must be faxed. Were vials provided by AMRO? If NO then weights MUST be obtained from client Was dry weight aliquot provided? If NO then fax client and inform the VOA lab ASAP.		Yes	No	NA	Comments
20. Subcontracted Samples: What samples sent: Where sent: Date: Analysis: TAT:					
21. Information entered into: Internal Tracking Log? Dry Weight Log? Client Log? Composite Log? Filtration Log?					
Received By: <i>MG</i> Labeled By: <i>CC</i>	Date: <i>5-4-06</i> Date: <i>5-5-06</i>	Logged in By: <i>CC</i> Checked By: <i>MG</i>	Date: <i>5-5-06</i> Date: <i>5-5-06</i>

CLIENT: SHAW E & I, Inc.
Project: 101960 Textron
Lab Order: 0605030

CASE NARRATIVE**VOLATILES-WATER:**

1. A Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample MW-206D (0605030-01A) Batch ID: R32828.

1.1 The % Recovery for 1 analyte out of 65 analytes in the MS was outside the laboratory control limits.

1.2 The % Recovery for 2 analytes out of 65 analytes in the MSD was outside the laboratory control limits.

1.3 The %RPD for 3 analytes out of 65analytes was outside the laboratory control limits.

2. A Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample MW-202D (0605030-08A) Batch ID: R32833.

2.1 The % Recovery for 1 analyte out of 65 analytes in the MS was outside the laboratory control limits.

2.2 The % Recovery for 1 analyte out of 65 analytes in the MSD was outside the laboratory control limits.

DATA COMMENT PAGE

Organic Data Qualifiers

- ND Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than the method detection limit.
- H Method prescribed holding time exceeded.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- # See Case Narrative

Micro Data Qualifiers

- TNTC Too numerous to count

Inorganic Data Qualifiers

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J Indicates a value greater than or equal to the method detection limit, but less than the quantitation limit.
- H Indicates analytical holding time exceedance.
- B Indicates that the analyte is found in the associated blank, as well as in the sample.
- MSA Indicates value determined by the Method of Standard Addition
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- W Post-digestion spike for Furnace AA analysis is out of control limits (85-115), while sample absorbance is less than 50% of spike absorbance.
- *
- + Duplicate analysis not within control limits.
- Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995
- # See Case Narrative

Report Comments:

1. Soil, sediment and sludge sample results are reported on a "dry weight" basis.
2. Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

Qualifiers: ND - Not Detected at the Reporting Limit

J - Analyte detected below quantitation limits

R - RPD outside accepted recovery limits
RPD - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

S - Spike Recovery outside accepted recovery limits

R - RPD outside accepted recovery limits

N/A - Not applicable where J values or ND results occur

Qualifiers: ND - Not Detected at the Reporting Limit

J - Analyte detected below quantitation limits

RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

S - Spike Recovery outside accepted recovery limits

R - RPD outside accepted recovery limits

B - Analyte detected in the associated Method Blank

NA - Not applicable where J values or ND results occur

AMRO Environmental Laboratories Corp.

Date: 20-May-06

Qualifiers: ND - Not Detected at the Reporting Limit

J - Analyte detected below quantitation limits

RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

S - Spike Recovery outside accepted recovery limits

R - RPD outside accepted recovery limits

B - Analyte detected in the associated Method Blank

NA - Not applicable where J values or ND results occur

AMRO Environmental Laboratories Corp.

Date: 20-May-06

Qualifiers: ND - Not Detected at the Reporting Limit

J - Analyte detected below quantitation limits

R - RPD outside accepted recovery limits

S - Spike Recovery outside accepted recovery limits

R - RPD outside accepted recovery limits

NA - Not applicable where J values or ND results occur

RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

Subject: Textron Gorham Soil Oxidant Demand Analysis Results

Project Number: 101960.05000000

Four (4) soil samples and one (1) groundwater were received 4/19/06 at the Shaw Environmental Technology Development Laboratory (TDL) for soil oxidant demand (SOD), total organic carbon (TOC), and fractional organic carbon (FOC) analysis. Samples were identified as follows:

Field ID	LAB ID	Sample Type
SB-210 (30-31')	TDL 10089	Soil – Dark brown organic sand
SB-210 (43-46')	TDL 10090	Soil – Dark brown organic sand
SB-214 (57-61')	TDL 10091	Soil – Dark silty sand & gravel
SB-213 (38-39')	TDL 10092	Soil – Dark silty sand
Site Groundwater	TDL 10093	Groundwater

Testing was done in accordance with the TDL Standard Operating Procedures for SOD using potassium permanganate as the oxidant, and colorimetric permanganate determination. A plot was generated of permanganate consumption as a function of time for each of the soils and is summarized below. Graphs and all sample data are attached. Samples were also analyzed for TOC and FOC. TOC data was obtained using a Tekmar TOC analyzer and instrument method with acid pretreatment of soil. FOC data including percent solids was obtained using ASTM D2974 at 440°C for organic matter and multiplying by a conversion factor of 0.58 to obtain the organic carbon concentration. The percent solids results are based on the as received soil.

Please see page 2 for a summary of SOD, TOC, FOC and percent solids results.

Summary of Soil Oxidant Demand (SOD) Results (g KMnO₄/kg wet soil), (Permanganate Consumption); % solids; and TOC and FOC results in mg/Kg:

<u>Field ID</u>	<u>SOD g/kg Wet Soil</u>	<u>TOC mg/Kg</u>	<u>%FOC</u>	<u>% Solids</u>
SB-210 (30-31')	23	1,200	0.33	82.4
SB-210 (43-46')	21	690	0.30	85.9
SB-214 (57-61')	1.6	1,670	0.43	88.1
SB-213 (38-39')	2.0	2,520	0.33	83.7
Site Groundwater (unfiltered)	0.22 (g/L)			

The typical SOD range for permanganate applications is 1-10 g KMnO₄ per kg soil. We have measured SODs for potential sites anywhere in the range of from 0.1 g KMnO₄/kg soil to 400 g KMnO₄/kg soil. The low values (less than or equal to 10 g/kg soil) indicate economical reagent costs to treat the area. Higher SOD values in the range of 10 g/kg to 30 g/kg indicate proportionally higher reagent costs to treat the area and treatment decisions will typically include other considerations such as the size of the treatment area, other treatment options available, etc. The lab measured SOD is a total SOD for permanganate, but in actual application, the field observed SODs are typically 25% to 50% lower due to incomplete soil exposure and mass transfer limitations that must be judged based on soil type, subsurface formation, hydraulic conductivity, etc.

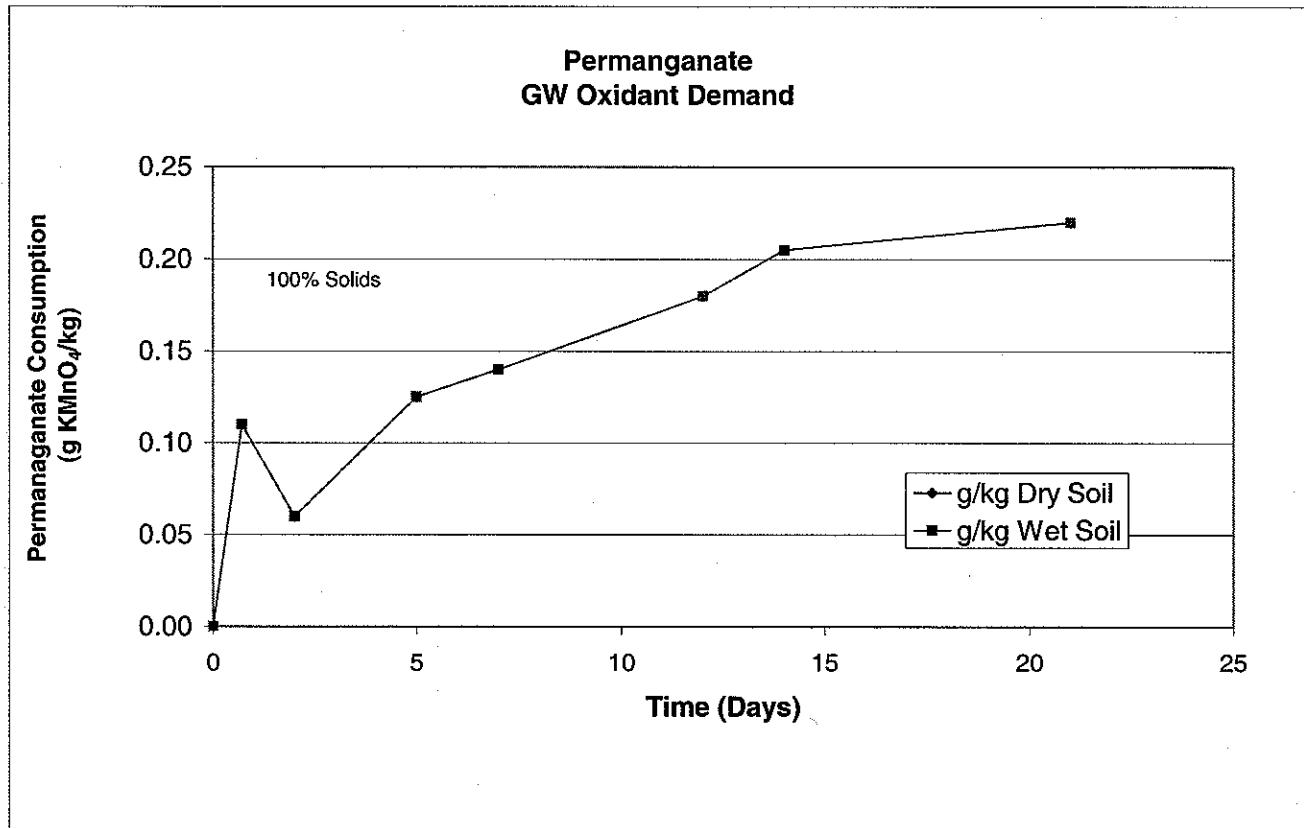

Please see attached SOD Data.

STATEMENT OF ANALYSIS

Client: Shaw Environmental, Inc.
Textron
Providence RI

Date: May 10, 2006

Contact: Ed VanDoren

Project No. 101960

Client Project Name / ID:	Textron
Date Received by Lab:	April 26, 2006
Number of Samples:	Two (2)
Sample Type:	Groundwater

1.0 Introduction

On April 26, 2006 a total of two (2) groundwater samples arrived at Shaw Environmental, Inc. Technology Development Laboratory in Knoxville, Tennessee. The microbial communities from the groundwater samples were screened for the presence of *Dehalococcoides* species.

2.0 Overview of Analytical Methodology

A Roche Real-Time LightCycler PCR instrument was used to determine the presence of and quantify *Dehalococcoides* sp. in groundwater. All cells (animals, plants, fungi, and bacteria) contain DNA that allows for their identification. The polymerase chain reaction (PCR) is a method of copying a specific sequence of DNA into a quantity that can be detected. If the sequence in *Dehalococcoides* sp. is located, the reaction creates multiple copies. During this reaction a genetic fluorescent tag specific for the region attaches to each copied strand of DNA, which is then detected by the instrument. A *Dehalococcoides* species DNA (positive control), a *Dehalococcoides*-negative bacterial species (negative control), and no template control (blank) are analyzed to verify the test results.

3.0 Results

The microbial communities in the groundwater samples were screened for the presence of *Dehalococcoides* species. The results are shown in the Table 1 below.

Table 1. *Dehalococcoides* Results

Sample No.	Shaw Sample No.	Concentration (cells / milliliter)
MW-101D	10141	1.0×10^1 U
MW 202D	10142	1.0×10^1 U
Dehalococcoides – Positive Control	--	1.0×10^5
Dehalococcoides – Positive Control	--	1.7×10^4
Negative (no DNA template control)	--	1.0×10^1 U
Negative (bacteria species without target)	--	1.0×10^1 U

U: Below the method detection limit

4.0 Quality Control (QC)

Standard laboratory QC was performed.
